SUMMARY

Security-focused IT graduate specializing in cloud infrastructure security, with hands-on experience designing hybrid cloud architectures on AWS and Azure. Proficient in vulnerability assessment, SIEM operations, DevSecOps pipelines, and network security. Seeking a cloud security role applying practical skills in securing cloud-native and hybrid environments.

TECHNICAL SKILLS

Cloud and Infrastructure: AWS (IAM, VPC, Security Groups, Load Balancer), Microsoft Azure (Containers, Auto-Scaling), Hybrid Cloud Architecture, Docker, Docker Compose, nginx

Security Tools: Nessus, Splunk (SIEM), Wireshark, Nmap, Snort, Volatility, Autopsy

DevSecOps: CI/CD security gating, GitHub Actions, SAST (Bandit, Semgrep), Software Composition Analysis (pip-audit), Secrets Scanning (Gitleaks), Container and IaC Scanning (Trivy, Hadolint), Container Image Signing

Security Domains: Vulnerability Assessment, Incident Response, Threat Detection, SIEM Operations, Threat Modelling (MITRE ATT&CK, STRIDE, PASTA), Encryption and Key Management, Application and API Security, Role-Based Access Control (RBAC), Audit Logging, Data Integrity (HMAC, Hash Chaining), IT Governance

Networking: Network Design and Installation, Firewall Configuration, VLANs, OSPF, VLSM, SNMP, MQTT, CCNA/CCNP track

Programming and Scripting: Python (FastAPI, pytest), Bash, SQL, HTML/CSS

Platforms and Systems: Linux (Ubuntu, Kali), Windows Server, PostgreSQL, TimescaleDB, EVE-NG, Cisco Packet Tracer

Languages: Arabic (native), English (fluent)

PROFESSIONAL EXPERIENCE

Security Intern

Jul 2025 - Aug 2025

Commercial International Bank (CIB), Egypt

- Conducted a vulnerability assessment simulation using Nessus, scanning a deliberately vulnerable endpoint, analyzing findings, and documenting remediation recommendations.
- Gained operational exposure to Splunk SIEM: explored log ingestion pipelines, constructed search queries, and configured a correlation alert for anomalous activity detection.
- Studied enterprise-grade security controls and governance frameworks applied in a regulated banking environment.

Network Intern

Jul 2024 - Jan 2025

Zewail City IT Department, Giza, Egypt

- Designed and partially implemented a network quota management system using open-source tools, enforcing per-user bandwidth policies across the campus network.
- Assisted in vulnerability assessments and security hardening tasks across the university internal network infrastructure.
- Participated in network installation and maintenance projects, gaining hands-on experience with enterprise switching, routing, and cabling.

PROJECTS

EcoForge GEMP: Green Energy Monitoring Platform

Aug 2026 - Sep 2026

Python, FastAPI, Docker, TimescaleDB, MQTT, OR-Tools CP-SAT, nginx

- Designed and implemented the full system as sole engineer on a two-person team: architecture, telemetry ingestion, optimization engine, API, and front end, delivered as a containerized stack behind 457 automated tests.
- Engineered tamper-evident telemetry storage with HMAC-signed, hash-chained meter readings and chain heads anchored outside the database volume, plus Role-Based Access Control and an audit log recording denied as well as permitted actions.
- Built a DevSecOps CI/CD pipeline blocking on any finding from Bandit, Semgrep, pip-audit, Gitleaks, Hadolint, and Trivy (filesystem, config, IaC, and image), with signed container builds and expiry-dated security exceptions.

AURA: Hybrid Cloud University Registration System

Sep 2025 - Jun 2026

AWS, Azure, React.js, Express.js, PostgreSQL

- Architected a hybrid cloud solution integrating on-premises servers with AWS (IAM, VPC, Security Groups, Load Balancer) and Azure containerized microservices to handle registration traffic spikes.

- Designed and enforced Role-Based Access Control (RBAC) and OTP-based multi-factor authentication to protect student and faculty data.
- Configured AWS IAM policies with least-privilege principles and Security Groups to segment traffic between application tiers.
- Leveraged Azure container orchestration to enable auto-scaling during peak load, ensuring availability without over-provisioning.

Secure Communication Protocol

May 2025

Python, PyCryptodome, RSA-2048, AES-GCM

- Built a secure messaging application implementing RSA-2048 for key exchange, AES-GCM for authenticated encryption, and RSA-PSS digital signatures for non-repudiation.
- Engineered session key derivation using HKDF-SHA256, ensuring forward secrecy across communication sessions.

Automated Network Backup and Disaster Recovery Framework

Dec 2025

Bash, OpenSSL AES-256, Cron, EVE-NG

- Developed a zero-touch automated backup system achieving a 24-hour Recovery Point Objective (RPO), with AES-256 encryption at rest and SSH/RSA-2048 secured transfers.
- Validated network resilience via Link Aggregation (Bonding), achieving 148 Mbps throughput with zero packet loss.

Enterprise Data Center Network Design

Dec 2025

Cisco Packet Tracer, OSPF, VLANs, SNMP

- Designed a three-tier hierarchical network supporting 600+ users across five departments, with OSPF dynamic routing and Dual-ISP redundancy for high availability.
- Implemented VLSM for efficient IP allocation and SNMPv2c for centralized proactive monitoring.

EDUCATION

B.Sc. in Computational Science and Artificial Intelligence

Oct 2022 - Jul 2026 (graduated)

Zewail City of Science and Technology, Giza, Egypt

- Major: Information Technology. Concentration: Networks, Security and Governance.
- Relevant coursework: Network Security, Cloud Computing, IT Governance, Cryptography, Operating Systems, Database Systems.

CERTIFICATIONS

Information Security Analyst - Infrastructure and Security

2026

Digital Egyptian Pioneers Initiative (DEPI), MCIT

- Capstone: designed a full Incident Response Playbook covering detection, containment, eradication, and recovery phases for enterprise security incidents.
- Core modules: SOC Operations, Vulnerability Management, SIEM and Incident Detection, Cyber Threat Analysis (IoCs and Attack Methodology).

Security Engineer Path - 3 Certificates Completed

2026

TryHackMe

- Security Engineer: IAM and cryptography, threat modelling frameworks (MITRE ATT&CK, STRIDE, PASTA), network and system security.
- DevSecOps: security in CI/CD, SAST, software composition analysis, secrets and container image scanning, pipeline hardening.
- Defending AWS: IAM policy design, VPC network controls, CloudTrail logging, and detection and response for cloud-native attacks.

Google Cybersecurity Professional Certificate

2023

Coursera

- Covered network security, asset and threat management, Python automation for cybersecurity, Linux and SQL for security operations, and detection and response.

VOLUNTEER EXPERIENCE

Junior Teaching Assistant - Network Installation and Maintenance

Sep 2024 - Dec 2024

Zewail City of Science and Technology, Giza, Egypt

- Assisted course instructors in lab sessions covering physical network installation, troubleshooting, and maintenance for a class of undergraduate students.

CURRENTLY LEARNING

Preparing for the AWS Certified Security - Specialty (SCS-C02) certification (in progress).
